WinNovation

EXECUTIVE MASTER PROGRAM 2026–27 • 1 YEAR

PREMIER TECHNOLOGY & SKILL EDUCATION

INTERNET OF THINGS & EMBEDDED SYSTEMS

Master Microcontrollers (ESP32, Arduino), Embedded C, Raspberry Pi, Sensor Interfacing, IoT Cloud Protocols (MQTT, HTTP), Edge AI & Real-Time Automation through 70% hands-on lab prototyping and industrial deployment.

1	70 : 30	25+	100%
YEAR	HANDS-ON LABS : THEORY	PRODUCTION IOT BUILDS	PLACEMENT SUPPORT
48 WEEKS COMPREHENSIVE	HARDWARE PROTOTYPING	SENSORS & CLOUD HUBS	CORE TECH INTERVIEWS

Arduino & ESP32 • Raspberry Pi & Linux • MQTT & Cloud IoT • Sensor Networks • Edge Computing • Smart Automation

Accelerate Your Career with Winnovation

Bridging the divide between academic electronics and production-grade embedded IoT hardware engineering.

"At Winnovation, our purpose is driven by the **future of our youth**. *The Internet of Things is revolutionizing global manufacturing, smart cities, healthcare, and robotics. We established Winnovation to bridge the gap between theoretical electronics and production-grade embedded hardware—ensuring our students master* **Microcontrollers, sensor integration, real-time wireless protocols (MQTT/HTTP), cloud IoT pipelines (AWS/Azure), and edge intelligence** *to solve real-world industrial challenges while strictly adhering to hardware safety and reliability."*

Sarbarinder Singh
Director, Winnovation Education Pvt. Ltd.

"Win With Winnovation" | Recognized Skill Incubator

NEP 2020 & Competency-Based Education (CBE) Blueprint

Winnovation curricula strictly align with India's **National Education Policy (NEP 2020)** and **CBSE Vocational Skill Education** paradigms. We replace rote memorization with experiential problem solving using Bloom's Taxonomy.

70% Hands-On Hardware Labs

Direct breadboard prototyping, circuit schematic design, firmware programming in Embedded C & MicroPython, and sensor-to-cloud data ingestion across all 12 modules.

Industrial Protocols & Standards

Rigorous adherence to hardware safety, low-power optimization, robust communication protocols (MQTT, LoRaWAN, BLE), and compliance with India's **DPDP Act, 2023**.

Outcome-Driven Portfolios

Every module produces verifiable working prototypes: smart home hubs, industrial telemetry monitors, edge AI vision nodes, and complete hardware journals on GitHub.

CBSE Vocational Assessment Scheme (100 Marks Blueprint)

Assessment Component	Weightage	Evaluation Criteria	Frequency
Continuous Formative Hardware Sprints	30 Marks	Weekly sensor interfacing labs, firmware debugging, and protocol validation	Weekly Milestones (12 Sprints)
Mid-Term Embedded & IoT Hackathon	20 Marks	Live 4-hour hackathon building an end-to-end sensor-to-cloud telemetry station	End of Month 1 & Month 2
Comprehensive Production Capstone	20 Marks	Full working embedded prototype (Smart Factory Monitor, Agriculture Station, Smart Hub)	Final Capstone Showcase
Certified Firmware & Schematic Journal	15 Marks	GitHub repository with clean C/Python code, circuit wiring schematics & demos	Terminal Evaluation
Technical Whiteboard & Hardware Viva	15 Marks	Oral defense explaining microcontroller peripherals, interrupts & cloud architecture	Final SDE & Embedded Jury

Surging Global Demand for IoT & Embedded Engineers

Connecting physical hardware to intelligent cloud ecosystems across Industry 4.0, automotive, and smart infrastructure.

80%

Enterprises Deploying IoT

Over 80% of manufacturing, automotive, and logistics companies actively recruit certified IoT and embedded engineers.

45%

Growth in AI-IoT Hiring

Specialists who combine embedded microcontrollers with edge computing and cloud analytics command premium industry packages.

$1.6T

Projected Global IoT Market

Exponential expansion creating over 1.5 million new embedded systems, firmware, and connected device roles globally.

Industry Salary Potential in India (AmbitionBox & Levels.fyi Benchmarks)

Entry-Level (0 – 2 Years)

₹6 – ₹12 LPA

Target Roles: Junior Embedded Engineer, IoT Firmware Developer, Hardware Test Engineer, Sensor Integration Specialist.

Mid-Level (3 – 6 Years)

₹12 – ₹25 LPA

Target Roles: Senior IoT Systems Architect, Firmware Team Lead, Industrial Automation Engineer, Embedded Linux Specialist.

Senior-Level (7+ Years)

₹25+ – ₹55+ LPA

Target Roles: Principal Hardware Architect, Head of IoT & Robotics, Director of Embedded Systems, Chief IoT Officer.

Who Should Pursue This Program?

Electronics & CS Graduates

B.Tech, BCA, MCA, and Diploma engineers looking to bridge the gap between academic theory and real-world embedded hardware & cloud IoT architectures.

Hardware & Electrical Enthusiasts

Engineers looking to master modern 32-bit microcontrollers, firmware programming in C/C++, wireless telemetry, and smart sensor interfacing.

Tech Entrepreneurs & Makers

Innovators seeking to build connected consumer hardware, smart agri-tech devices, intelligent wearables, and industrial automation prototypes.

Software Developers Upskilling in IoT

Backend or software professionals wanting to expand into device-to-cloud telemetry pipelines, MQTT/CoAP protocols, and edge compute nodes.

THE ECONOMIC TIMES: "The IoT and embedded systems sector is witnessing a 40%+ surge in demand across automotive, smart energy, and robotics hubs in India."

NASSCOM & GARTNER: "By 2026, over 25 billion connected IoT devices will demand specialized embedded engineers who understand hardware, firmware, and cloud scale."

Roadmap to Master IoT & Embedded Systems

A structured competency ladder transforming learners into production-ready Embedded Firmware and Cloud IoT Engineers.

1 **Embedded Systems Foundations & Circuit Hardware** — Weeks 1 – 8 (Months 1–2)

Microcontroller architectures (Harvard vs Von Neumann), GPIO pins, analog vs digital signals, Ohm's law, pull-up/pull-down resistors, and hands-on breadboard circuit prototyping.

2 **Microcontroller Programming (Arduino & ESP32)** — Weeks 9 – 16 (Months 3–4)

Embedded C/C++ programming, registers, hardware timers, interrupts, PWM signal control, ADC calibration, and sensor interfacing with ultrasonic, DHT11, and PIR modules.

3 **Advanced Embedded Systems & Raspberry Pi Computing** — Weeks 17 – 24 (Months 5–6)

Raspberry Pi OS setup, Linux shell scripting, Python GPIO control, camera module integration, and multi-threading for real-time sensor polling and edge logic.

4 **IoT Communication Protocols & Networking Standards** — Weeks 25 – 32 (Months 7–8)

Serial communication (UART, SPI, I2C), wireless protocols (Wi-Fi, Bluetooth BLE), and networking standards (TCP/IP, HTTP REST, MQTT publish-subscribe, and LoRaWAN basics).

5 **Cloud IoT Platforms, Telemetry Dashboards & Edge AI** — Weeks 33 – 40 (Months 9–10)

Ingesting telemetry to AWS IoT Core and ThingsBoard, real-time time-series dashboards, Over-The-Air (OTA) firmware updates, and Edge AI inference on ESP32/Raspberry Pi.

6 **Industrial IoT Security, Optimization & Capstone Defense** — Weeks 41 – 48 (Months 11–12)

Hardware security, payload encryption (AES/TLS), power management (deep sleep modes), PCB design basics, end-to-end capstone deployment, and corporate jury defense.

The CAISEN Immersive Learning Cycle

1. STUDY	2. ATTEMPT	3. MAKE	4. REVISE	5. TEST
Conceptual Clarity	**Hardware Drills**	**Live Prototyping**	**Debugging & Logic**	**Jury Defense**
Live masterclasses & 1:1 expert lab mentoring with 24×7 recorded sessions.	Daily breadboard wiring, sensor calibrations & firmware coding sprints.	Build physical IoT hardware prototypes and stream telemetry to cloud brokers.	Hardware debugging with logic analyzers, code refactoring & memory profiling.	Mock hardware whiteboarding & technical defense before senior embedded juries.

Curriculum Blueprint: Month 1 & 2

Hardware foundations, microcontrollers, embedded C, Raspberry Pi, and wired/wireless communication protocols.

Month 1: Embedded Systems, Arduino & ESP32 Microcontrollers

Weeks 1 – 12 | 120 Contact Hours

Core Theoretical & Applied Topics

- Introduction to Embedded Systems: Microprocessors vs Microcontrollers, 8-bit to 32-bit cores (ATmega328P, ESP32 dual-core Xtensa).
- Circuit Fundamentals & Components: Resistors, capacitors, transistors as switches, relays, voltage regulators, and power supplies.
- Embedded C/C++ Programming: Pointers, bitwise operations, memory layout, register manipulation, and state machines.
- Peripheral Interfacing: GPIO, ADC (Analog-to-Digital Conversion), DAC, PWM motor speed control, and hardware timer interrupts.
- Sensor & Actuator Integration: Temperature/Humidity (DHT11/DHT22), ultrasonic distance sensors, LDRs, servo motors, stepper motors, and relays.
- Hardware Debugging: Oscilloscope measurements, multimeter testing, UART serial monitoring, and logic level shifting.

Guided Laboratory Practical & Takeaways

- **Lab 1:** Multi-sensor environmental monitoring circuit built on breadboard with automated buzzer and LED alarm thresholds.
- **Lab 2:** Interrupt-driven digital tachometer and PWM motor control with rotary encoder feedback.
- **Lab 3:** Two-way ESP32 dual-core task scheduling using FreeRTOS primitives.
- **Competency:** Microcontroller architecture, circuit prototyping, Embedded C, peripheral driver development.

Milestone Capstone 1: Industrial Edge Energy & Motor Health Telemetry Controller
An autonomous ESP32 dual-core controller monitoring current transducers, thermistors, and vibration harmonics, executing local emergency cutoff and streaming encrypted metrics via MQTT.

Month 2: Raspberry Pi, Linux & IoT Communication Protocols

Weeks 13 – 24 | 120 Contact Hours

Core Theoretical & Applied Topics

- Raspberry Pi Architecture: Single-Board Computers (SBCs), Raspberry Pi 4/5, headless Linux setup, SSH remote access, and system services.
- Embedded Python & Hardware Control: Python GPIO programming, hardware PWM, sensor polling scripts, and camera module integration.
- Hardware Bus Protocols: Serial UART, Inter-Integrated Circuit (I2C) bus addressing, Serial Peripheral Interface (SPI) master-slave communication.
- Wireless Networking Fundamentals: Wi-Fi station and access point modes, Bluetooth Low Energy (BLE) GATT profiles and beacons.
- IoT Messaging Protocols: MQTT (Broker, Publisher, Subscriber, QoS levels, keepalive), HTTP RESTful APIs for IoT, and WebSockets.
- Edge Data Storage: SQLite on Raspberry Pi, JSON payload formatting, and local circular logging for offline resilience.

Guided Laboratory Practical & Takeaways

- **Lab 4:** Interfacing I2C OLED display and SPI accelerometer to stream real-time motion coordinates.
- **Lab 5:** Mosquitto MQTT broker deployment with multi-client pub/sub messaging and QoS validation.
- **Lab 6:** Raspberry Pi automated surveillance node capturing motion-triggered image frames.
- **Competency:** Linux embedded computing, I2C/SPI bus protocols, MQTT networking, edge Python programming.

Milestone Capstone 2: Distributed LoRaWAN Subsurface Agricultural Telemetry Station
A dual-tier IoT station utilizing ESP32 nodes to monitor multi-depth soil volumetric water content and ambient climate, transmitting over LoRaWAN to a Raspberry Pi gateway.

Curriculum Blueprint: Month 3 & Industrial IoT

Cloud IoT platforms, Edge AI, Over-the-Air updates, hardware security, and industrial automation.

Month 3: Cloud IoT Integration, Edge AI & Industrial Deployment

Weeks 25 – 48 | 240 Contact Hours

Cloud IoT & Edge Computing

- Cloud IoT Infrastructure: AWS IoT Core, Microsoft Azure IoT Hub, Google Cloud IoT concepts, and device shadow / digital twins.
- Real-time Dashboards & Time-Series: InfluxDB, ThingsBoard IoT platform, Grafana dashboards, and webhook alerts (Telegram/Email/SMS).
- Edge AI & Computer Vision: TinyML concepts, deploying lightweight TensorFlow Lite models on Raspberry Pi for visual defect detection.
- Over-The-Air (OTA) Updates: Remote firmware updating over Wi-Fi, dual-bank partition flashing, and rollback safety mechanisms.
- Hardware Security & Cryptography: TLS/SSL encryption for MQTT, X.509 device certificates, secure boot, and API token authentication.
- Industrial Standards & Power Optimization: Modbus/RS485 basics, deep sleep power management, battery longevity, and India DPDP Act compliance.

Advanced Labs & Capstone Defense

- **Lab 7:** Connecting ESP32 securely to AWS IoT Core using X.509 certificates and MQTT over TLS.
- **Lab 8:** Deploying ThingsBoard dashboard with interactive toggles and automated SMS alerts.
- **Lab 9:** Over-the-Air firmware deployment sprint with failure recovery fallback.
- **Capstone Defense:** Full working hardware prototype review before senior embedded system architects.

Milestone Capstone 3: Enterprise Industrial Telemetry & Smart Factory Gateway
A cloud-connected industrial gateway indexing vibration, temperature, and current sensors from machinery, publishing encrypted telemetry to AWS IoT Core and rendering real-time predictive maintenance dashboards.

Industry Standard IoT & Embedded Tech Stack

Hardware & Microcontrollers

- Arduino Uno & Mega (ATmega328P)
- ESP32 & ESP8266 (Dual-Core Wi-Fi/BLE)
- Raspberry Pi 4 / 5 & Compute Module
- ARM Cortex-M (STM32 fundamentals)
- Relay modules, Sensors, OLED & LCDs

Protocols & Networking

- MQTT (Mosquitto & HiveMQ Brokers)
- HTTP / HTTPS RESTful APIs & WebSockets
- I2C, SPI, UART Serial Busses
- Bluetooth Low Energy (BLE GATT)
- Wi-Fi (802.11 b/g/n) & LoRaWAN Basics

Cloud, Edge & Software

- Embedded C / C++ & MicroPython
- Python, FreeRTOS & Linux Shell
- AWS IoT Core & Azure IoT Hub
- ThingsBoard & Grafana Dashboards
- KiCad PCB Schematic Design Basics

Certification Alignment: Fully prepares candidates for **AWS Certified Cloud Practitioner**, **EC-Council Certified IoT Security Specialist**, and **Winnovation Master Credential**.

Industry Ready

Industry-Ready Project Portfolio

Production-grade Embedded Systems and connected IoT applications engineered for real-world reliability.

Project 1: Industrial Edge IoT Gateway & Predictive Telemetry Architecture

ARM Cortex & ESP32 | Modbus RTU / RS-485 | FreeRTOS | AWS IoT SiteWise

Business Problem: Enterprise manufacturing facilities experience critical equipment downtime due to unmonitored motor vibration, thermal runaway, and mechanical strain across factory production lines.

Deliverable: Production DIN-rail mounted gateway interfacing industrial PLCs via RS-485 Modbus, computing edge FFT spectral analysis, and streaming telemetry to AWS IoT SiteWise with sub-100ms anomaly detection.

Project 2: Autonomous Edge AI Computer Vision & Fleet Telematics Gateway

Raspberry Pi 5 | OpenCV & TensorRT | Vehicle CAN Bus | 4G/LTE Modem

Business Problem: Commercial transportation fleets and robotics require on-device vision processing for obstacle perception and operator safety coupled with real-time powertrain telemetry.

Deliverable: Multi-sensor edge compute station running lightweight neural models at 30 FPS alongside real-time vehicle CAN bus diagnostics, with automatic cellular failover and cloud shadow synchronization.

Project 3: Distributed LoRaWAN Smart Utility & Environmental Monitoring Grid

ESP32 + SX1262 LoRa | ChirpStack / TTN | AES-128 Encryption | InfluxDB

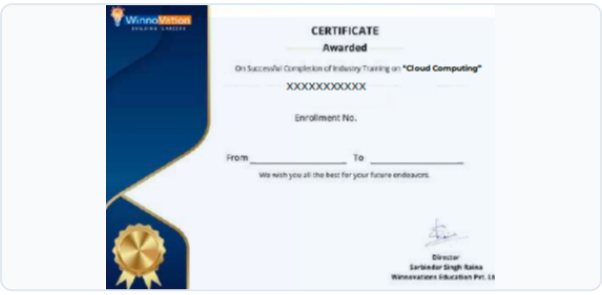

Business Problem: Municipal smart city infrastructure and remote agricultural zones require long-range sensor telemetry spanning 10+ kilometers with 5-year battery autonomy where cellular connectivity is infeasible.

Deliverable: Enterprise multi-node LoRaWAN infrastructure achieving 12km wireless range with adaptive data rate (ADR), hardware AES-128 payload encryption, solar energy harvesting, and central SCADA dashboards.

Industry-Recognized Certifications

4 official credentials validating your embedded systems, firmware engineering, and cloud IoT skills to global recruiters.

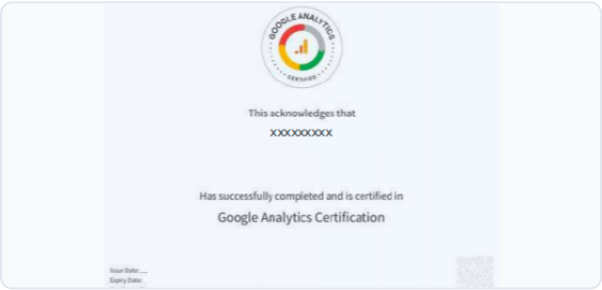

Winnovation Master Certificate in IoT

Awarded on successful completion of 48 weeks of intensive 1-year training, 15+ production hardware builds, and jury defense of all 3 capstone projects. Features verified QR code.

Executive IoT Security & Governance

ANSI-accredited international certification validating secure embedded development lifecycles, encrypted telemetry, hardware tamper resistance, and device safety.

Google Cloud Professional IoT & Data

Industry gold standard credential verifying proficiency in scalable cloud data pipelines, real-time message streaming with Pub/Sub, and distributed edge computing.

AWS Certified Cloud Practitioner Credential

Official Amazon Web Services credential validating device provisioning on AWS IoT Core, message broker rules engine, and cloud analytics.

Curriculum Endorsed & Co-Accredited By Global Learning Standards

Google Cloud Recognized • AWS Academy Partner • NASSCOM FutureSkills Prime • EC-Council Accredited • Open Source Hardware Aligned

Learn from Industry Experts

Seasoned hardware architects, embedded firmware leads, and IoT cloud specialists guiding you through every lab.

Abhishek Mishra

8+ Yrs Exp

Senior Embedded Systems & Firmware Lead

Specializes in ARM Cortex architectures, Embedded C/C++ firmware optimization, real-time sensor processing pipelines, and low-level driver development.

Embedded C++ | ARM Cortex | Firmware Drivers

Surekha Kanwar

10+ Yrs Exp

Senior Hardware Architecture & Circuit Design Lead

Expert in schematic capture, analog/digital signal conditioning, power management unit (PMU) optimization, and industrial PCB layout standards.

Circuit Design | PCB Schematics | Signal Conditioning

Saurabh Dwivedi

5+ Yrs Exp

Senior Cloud IoT & Distributed Systems Lead

Architects high-throughput telemetry ingestion on AWS IoT Core, Azure IoT Hub, Kafka device streams, and distributed time-series databases.

AWS IoT Core | MQTT Brokers | Cloud Telemetry

Nisha Pal

5+ Yrs Exp

Senior IoT Dashboard & Web Interfaces Lead

Develops full-stack interactive telemetry interfaces using ThingsBoard, Next.js, WebSockets, and real-time device control panels.

ThingsBoard | WebSockets | IoT Dashboards

Arun Kumar

5+ Yrs Exp

Senior IoT & Robotics Engineer

Specializes in Arduino, ESP32, and Raspberry Pi robotics, motor control algorithms, autonomous sensor payloads, and edge hardware interfacing.

ESP32 & Arduino | Robotics Systems | Sensor Networks

Priyanka Saini

7+ Yrs Exp

Senior Edge Computing & Computer Vision Lead

Directs edge AI applications using Raspberry Pi 4/5, OpenCV camera streams, lightweight neural models, and real-time visual defect detection.

Raspberry Pi | Edge AI Vision | OpenCV Streams

Pavneet Kaur

5+ Yrs Exp

Senior Technical Career Coach & Interview Strategist

Prepares candidates for elite core engineering interviews, hardware design whiteboarding, behavioral rounds, and embedded defense juries.

System Whiteboard | STAR Defense | Core Engineering

Diksha Sachan

8+ Yrs Exp

Head of Technical Curriculum & Protocol Engineering

Designs rigorous hands-on laboratory exercises in I2C/SPI bus protocols, wireless networking (Wi-Fi, BLE, LoRaWAN), and FreeRTOS multitasking.

I2C / SPI / UART | Wireless Protocols | FreeRTOS Tasks

Prince Pal

5+ Yrs Exp

Senior Embedded Security & Device Governance Specialist

Ensures hardware cryptographic compliance, TLS encryption for MQTT, secure boot implementations, and India DPDP Act 2023 adherence.

IoT Security | TLS / X.509 | Device Governance

1:1 Dedicated Hardware Mentorship & Live Lab Reviews

Weekly personalized office hours, schematic reviews, and mock technical whiteboard interviews tailored to your target core engineering role.

50+ Hours Live Mentorship

Student Success Stories

Hear how Winnovation graduates transitioned into high-growth Embedded Systems and IoT hardware engineering roles.

Syed Vernice Kashani

B.Tech (CSE)

Embedded Systems Engineer

"Mastering Embedded Systems and IoT at Winnovation was a game-changer. The hands-on labs with ESP32, FreeRTOS, and MQTT communication gave me the confidence to build production-grade connected hardware."

Prabjyot Singh

B.Tech (CSE)

Cloud IoT Solutions Associate

"I am deeply grateful to Winnovation for providing an in-depth learning experience in IoT Cloud integration. Connecting microcontrollers to AWS IoT Core and building live ThingsBoard dashboards directly secured my placement."

Rabinder Singh

Govt. Technical Trainer

Senior Embedded & IoT Trainer

"Winnovation has been a game-changer in my career journey. The structured hardware curriculum, supportive mentors, and practical project builds elevated my technical problem-solving and teaching career to the next level."

Suhaib Muzaffar

B.Tech (CSE)

IoT Firmware Developer

"I sincerely thank Winnovation and our trainers for equipping me with real-world knowledge in Arduino, Raspberry Pi, and sensor protocols. The hands-on training and placement support gave me complete confidence."

Lakshay Suryavanshi

RA at NextX Tech

IoT Hardware Systems Engineer

"The practical training at Winnovation bridges the gap between academics and industry. Building real capstones like smart home hubs and precision agriculture monitors set my portfolio apart during hiring rounds."

Aryan Choudhary

B.Tech (CSE)

Junior Embedded Engineer

"The practical training I received in Embedded C, microcontrollers, and wireless protocols at Winnovation played a key role in shaping my career path. Their guidance and mock interviews prepared me to excel."

100% Placement Record: Highest IoT Package: ₹18.5 LPA | Average Starting CTC: ₹7.2 LPA

Verified Alumni Network

Backed by 100+ Hiring Partners

Leading technology enterprises, automotive giants, smart electronics manufacturers, and robotics innovators recruiting Winnovation engineers.

HONDA | adani Ports and Logistics | SAMSUNG
airtel | LUMINOUS Enjoy Technology | Akasa Air | SOTI
vivo | HEIZEN | SOPHOS | UTKARSH
XONIER TECHNOLOGIES | Data Resolve | DP WORLD
FORTRA | Emcure | we360.ai | ALKEM
Medtronic | Aarcon | motadata | FORTINET

100+
Active Corporate Recruiters
Hardware OEMs, Automotive & IoT Tech

15+
Interview Drives Annually
Exclusive On-Campus & Direct Hiring

100%
Placement Assistance
Hardware vivas, GitHub review & SDE calls

Holistic Guidance & Admissions

The complete CAISEN support framework powering your journey from aspiring learner to elite IoT & Embedded systems engineer.

CAISEN 10 Core Competencies for IoT & Embedded Excellence

Microcontroller Architecture | Embedded C / C++ | Sensor Interfacing | Wireless Protocols (BLE/Wi-Fi) | MQTT & Cloud IoT | Edge Computing & Linux | Circuit Prototyping | FreeRTOS Tasks | Hardware Security (TLS) | Technical Whiteboard Viva

100% Core Placement Support

Dedicated placement cell conducting exclusive hiring rounds with top IoT OEMs, smart electronics, and robotics firms.

Hardware Portfolio & GitHub

ATS-compliant core engineering resume, circuit schematics, clean C/Python repositories, and video demo portfolio.

Rigorous Mock Hardware Vivas

Simulated 1-on-1 technical whiteboard rounds, circuit debugging defense, and STAR interview coaching.

Lifetime Code & Schematic Access

Unlimited access to high-definition recorded masterclasses, project wiring diagrams, and updated firmware libraries.

Personal Hardware Lab Mentorship

Individual career mentoring, technical project roadmap guidance, and personal coaching to resolve complex circuit bottlenecks.

24×7 Maker Community & TAs

Dedicated Discord and WhatsApp peer discussion channels with active teaching assistants resolving code and wiring queries.

The Winnovation Technology Ecosystem

Internet of Things (IoT) & Embedded Systems | Full Stack Web Development | Data Structures & Algorithms (DSA) | Data Science & AI/ML | Data Analytics & BI | Generative AI & Prompt Engineering | Cloud Computing & DevOps | Cyber Security & CEH
